

**Description:** We can provide the following weight indicators.

- Wireline weight indicator – Measures line tension with a hydraulic load cell.
- Deflection weight indicator (clipper) – Measures line tension via diaphragm clamped to the line.
- Midget weight indicator – Measures line tension with a hydraulic load cell (non-spin load cell also available upon request).
- Anchor weight indicator and deadline anchor – The weight indicator works in conjunction with a hydraulic load cell mounted on the deadline anchor.
- Type C weight indicator – Measures line tension using the deflection principle.

**To order:** Advise on the following for pricing requests.

- Type of indicator required
- Number of lines strung on the mast/derrick
- Wire rope diameter
- Maximum load applied to the mast/derrick
- Unit of measurement for the dial - English or Metric (specify kg or daN)
